Table of Contents

Appendix A – Survey results	1
Appendix B – Mapping tool results	12
Appendix C – Stakeholder workshop boards	23

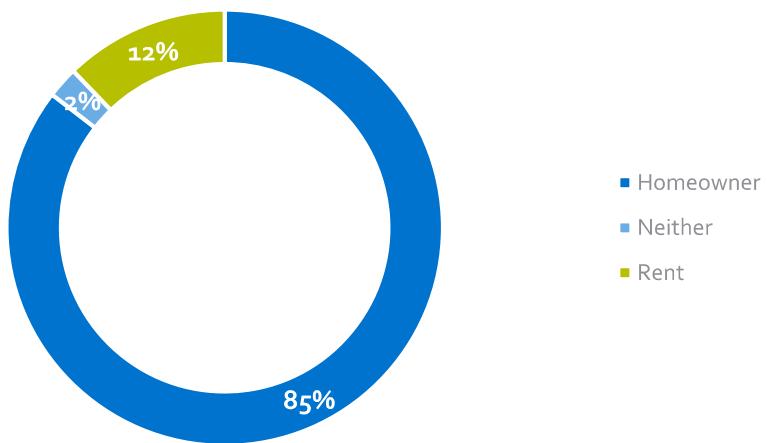

Appendix A – Survey results

Open-ended responses are included at the end of Appendix A.

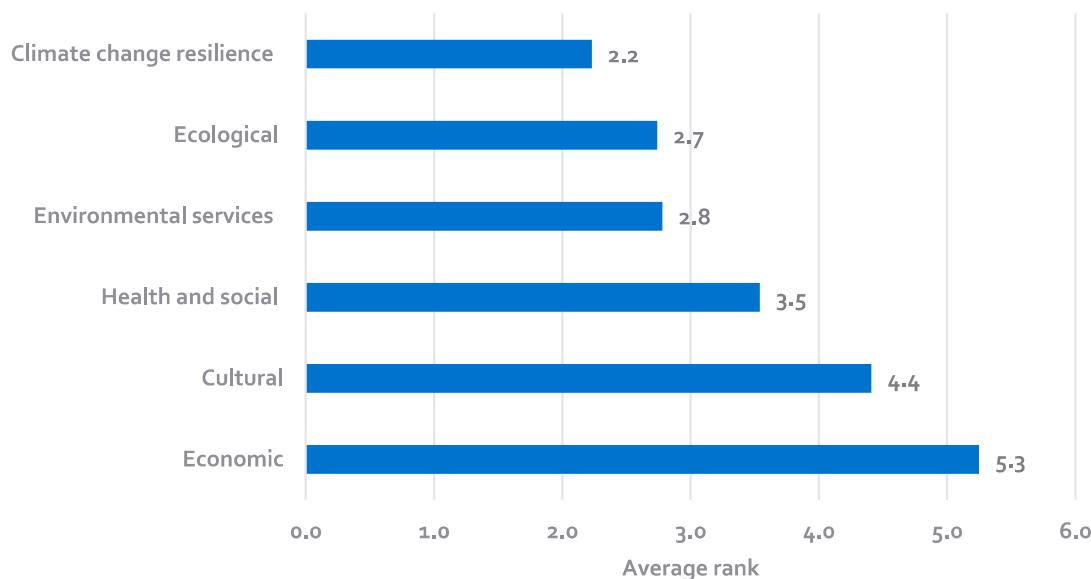

Are you a Kelowna resident?

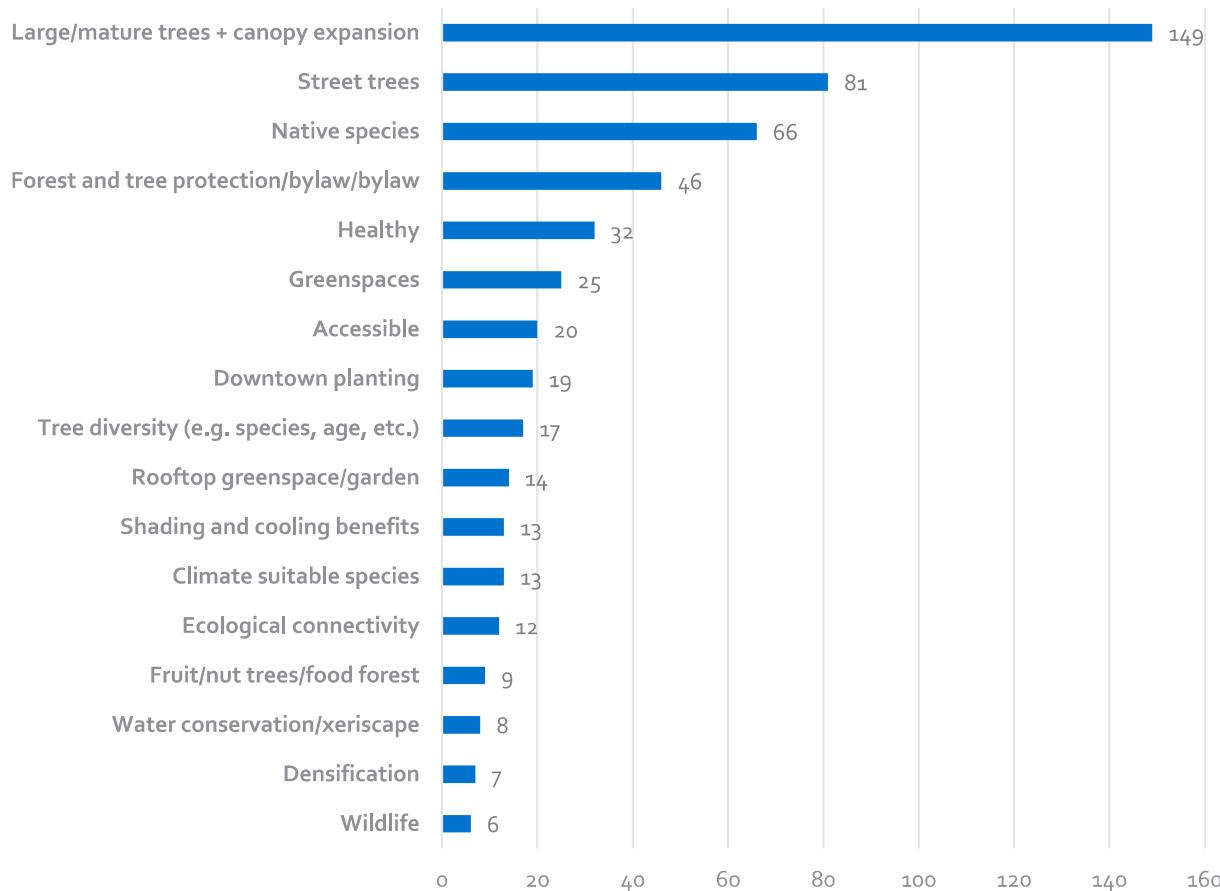

Are you a homeowner or do you rent?

What types of urban forest benefits are most important to you and your community? Please rank the following types of benefits from most (1) to least important (6).

Imagine it is 2040. What is your ideal image of Kelowna's urban forest? – Common Themes

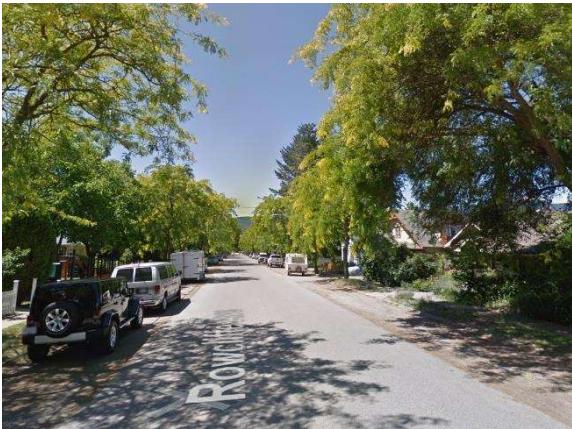

Please consider the following photos of trees along streets.

A. Few or no trees

B. Regularly spaced small trees

C. Regularly spaced, medium-sized trees

D. Mixed spacing and species, medium-sized trees

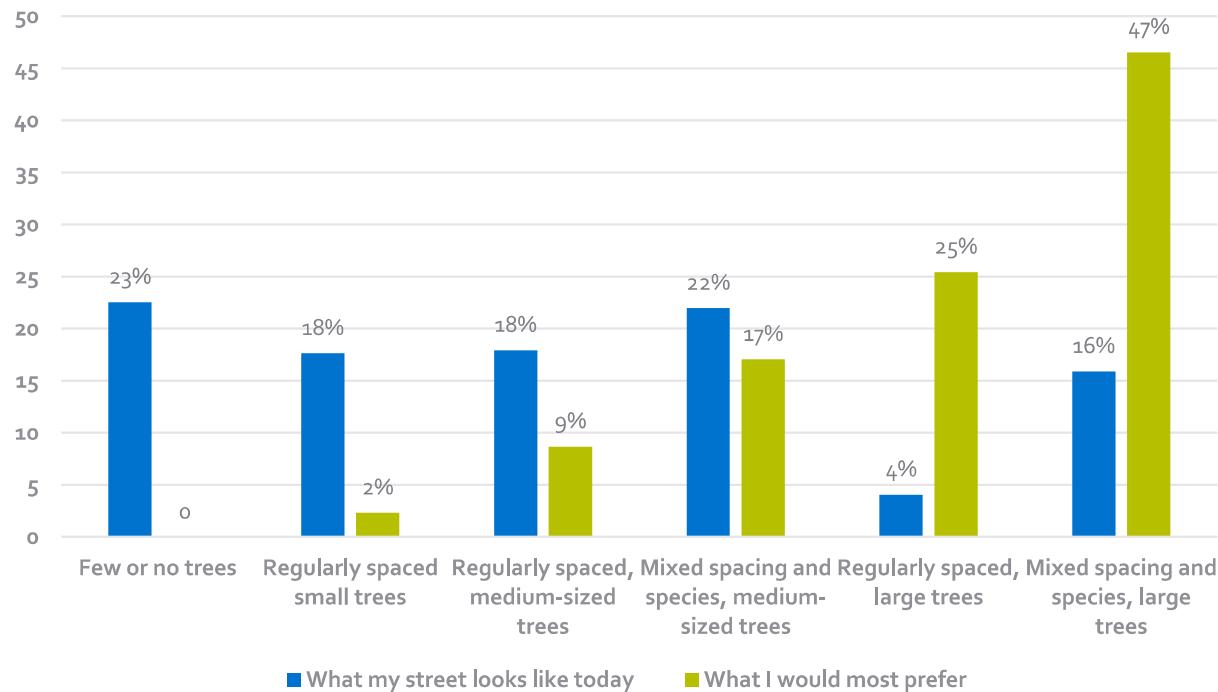

E. Regularly spaced, large trees

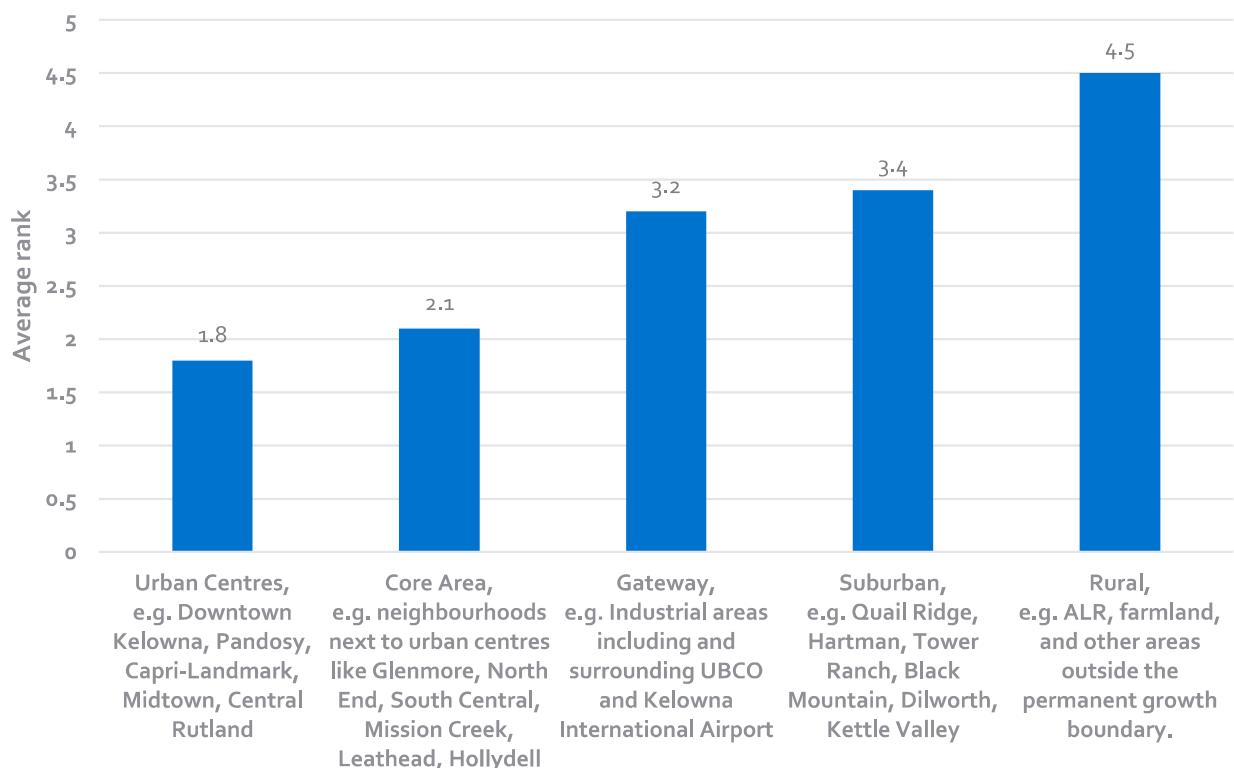

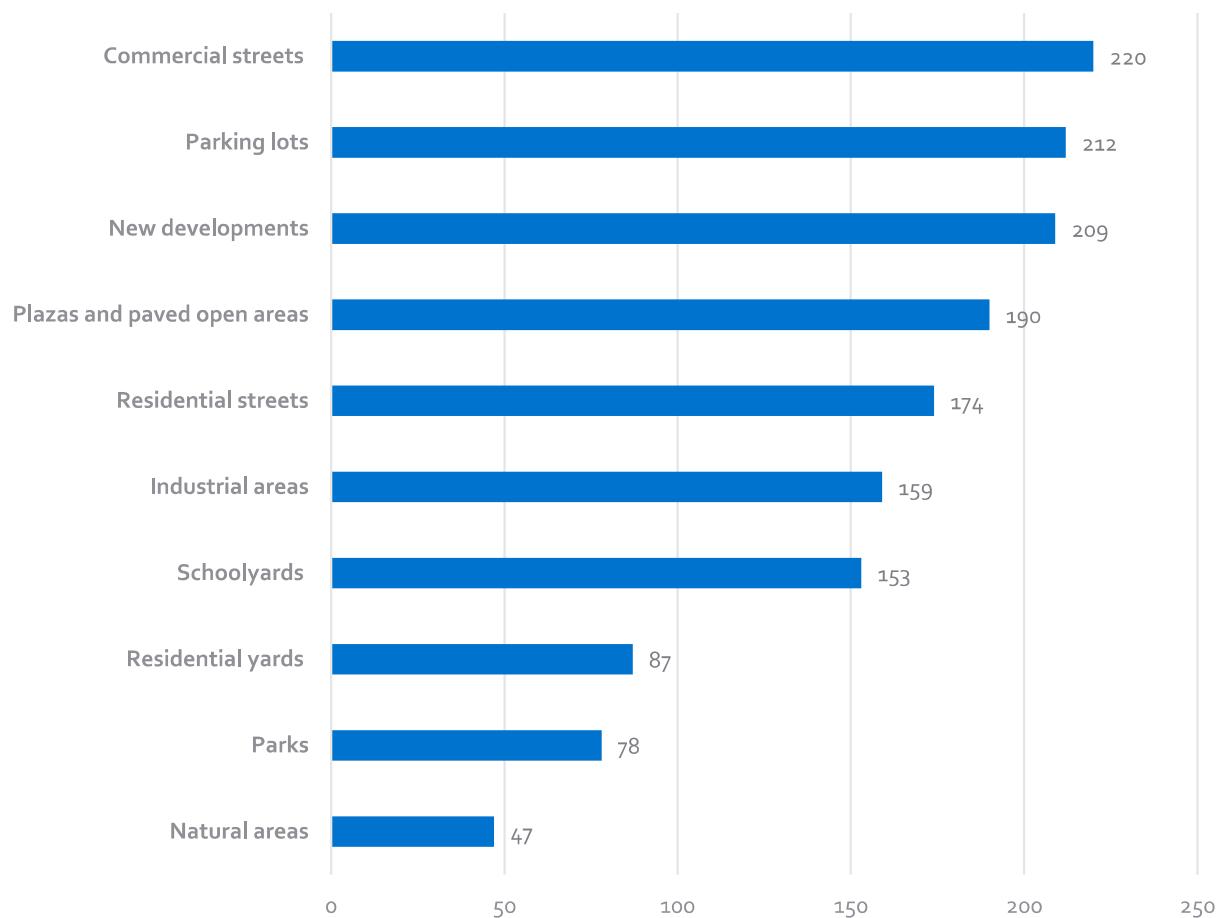

F. Mixed spacing and species, large trees

Select the picture (A-F) that your street currently looks the most like and what you want your street to look like.

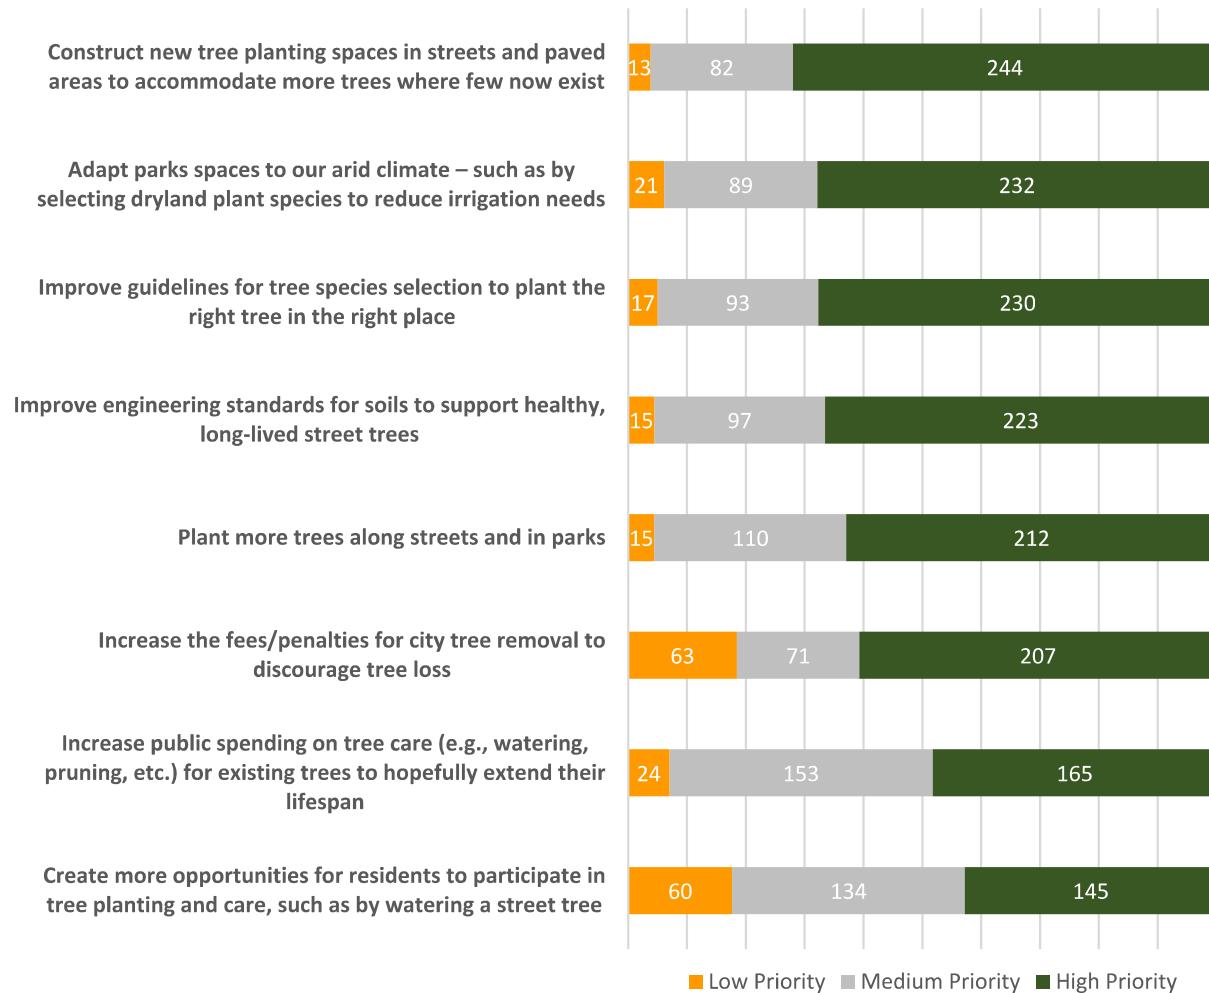

In what neighbourhoods do you think more trees should be planted? Please rank the following areas from most (1) to least important (5)

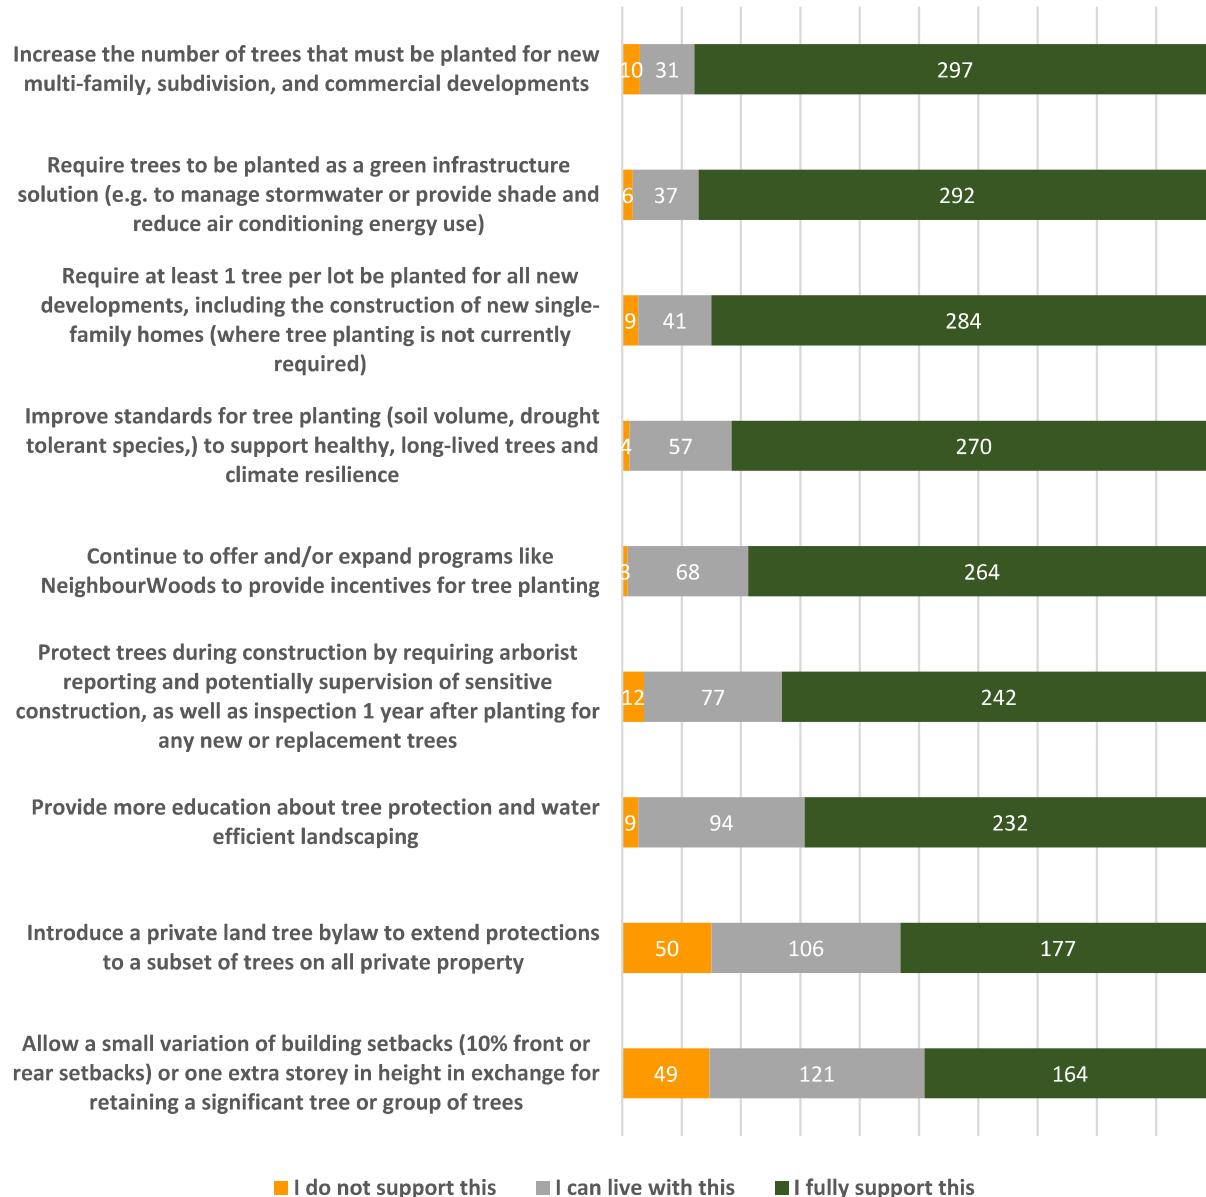

Where are trees missing from your top-ranked area?

Please rank each of these based on whether they are a high, medium, or low priority to you. Where space allows on City-owned land, I would like Kelowna to:

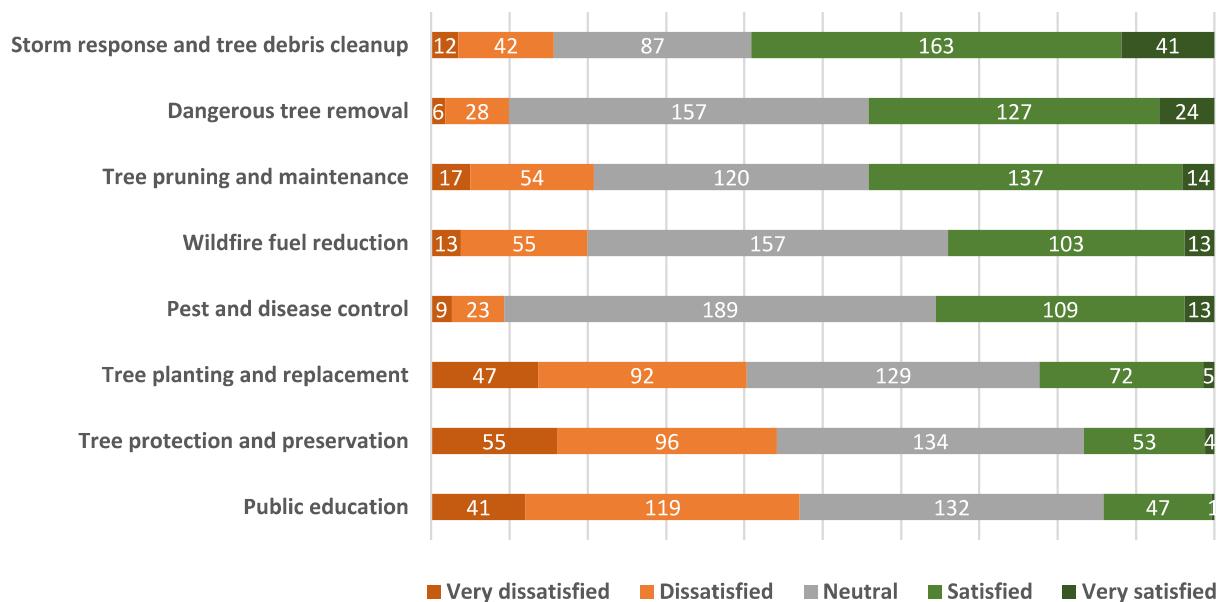

On private property, what actions would you support the City taking to improve the urban forest?

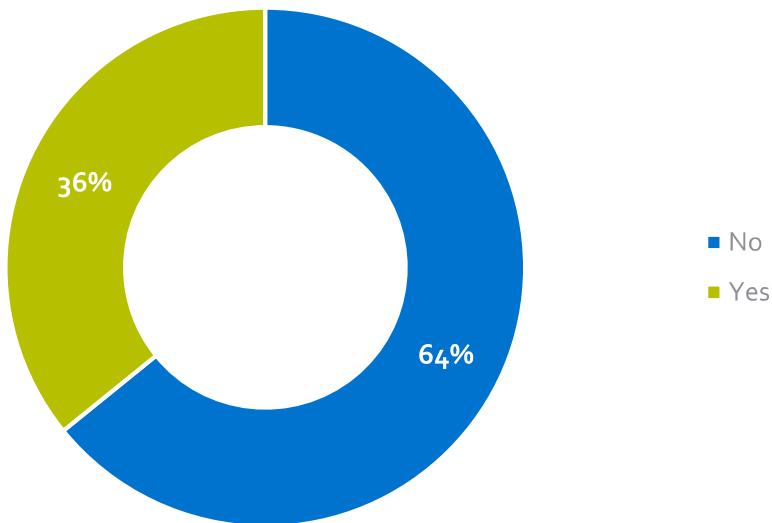

What are your biggest concerns with respect to tree loss on private land? Please rank the following options from 1 (most important) to 6 (least important).

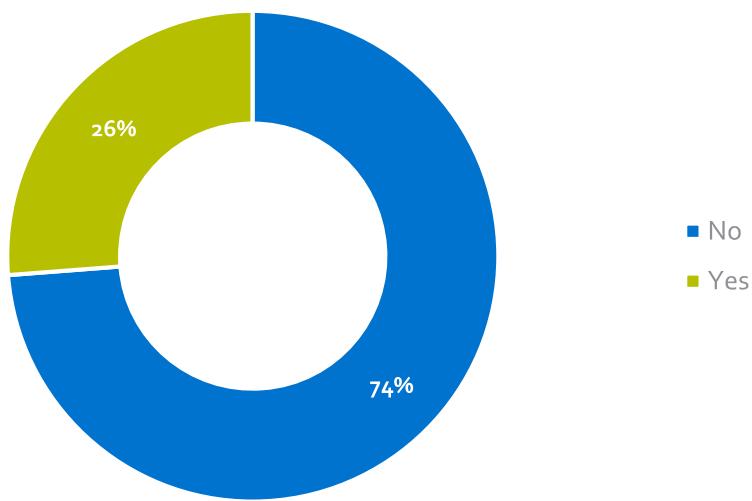

How satisfied are you with current levels of service provided by the City for:

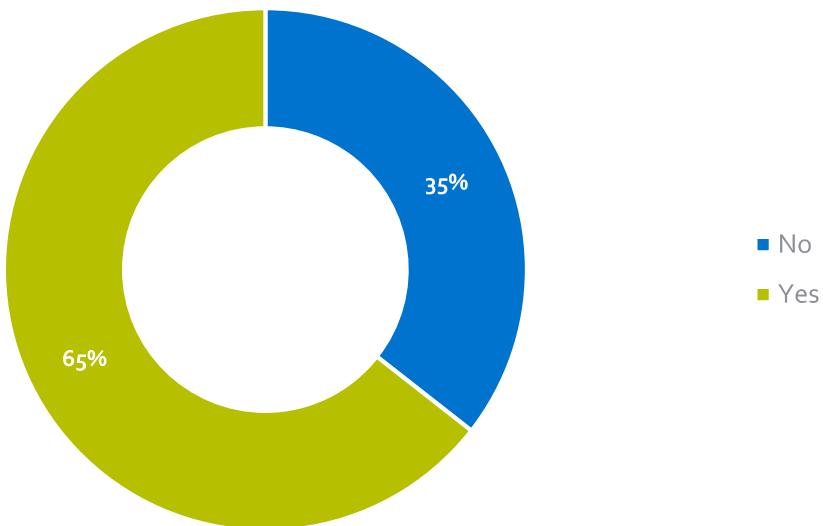

Have you ever watered a City-owned street or park tree in Kelowna?

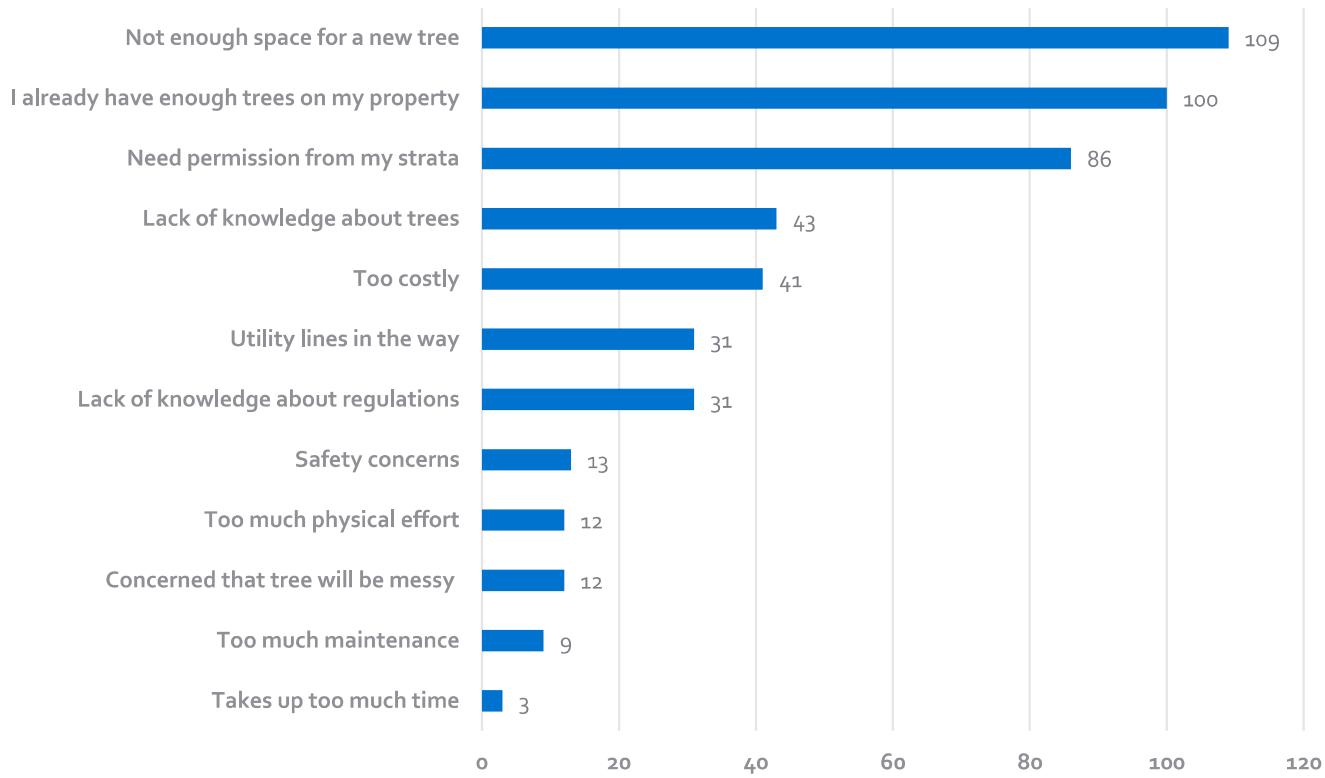

Have you bought a tree through the City of Kelowna's NeighbourWoods Program in the last five years?

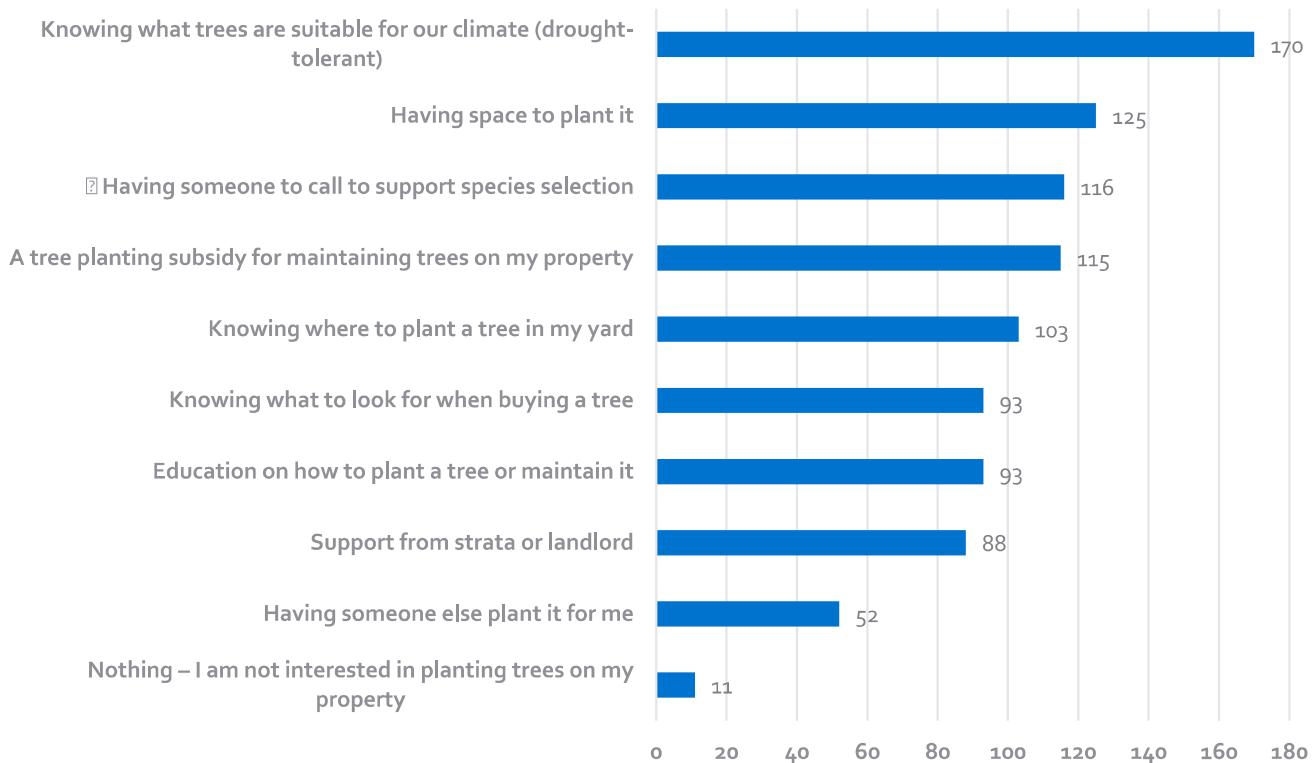

Have you planted at least one tree on your property in the last five years?

What barriers prevent you from planting and maintaining a tree (or additional trees) on your property?

What would encourage you to plant a tree or trees on your property?

Appendix B – Mapping tool results

Green pin - for marking urban forest locations that you value

* Each row corresponds to one pin. Rows with no text entry indicate a pin was submitted with no further comment.

Comment	What do you want to improve at this location?
So many large old trees in the north end - it should be a high priority to retain and not kill them as development plans are underway	So many large old trees in the north end - it should be a high priority to retain and not kill them as development plans are underway
	I stumbled across this park while walking with a friend's baby and was so happy to find an easily accessible pocket of nature to explore. I believe this applies to every park and every bit of urban forest our city has!
	Thank goodness for this community garden and park! When we were forced to downsize, being able to get out in a bit of nature close by has been lifesaving.
	the trees along this path are so valuable in the summer heat. People sit on the benches in the shade and chat with neighbours.
	This corridor is remarkably absent of green places to wander. One has to endure much exhaust and traffic to get anywhere pleasant on foot around here.

Comment	What do you want to improve at this location?
nice uniform trees here. Nice aesthetic. But other places need more variety, lets get some native cedars and tamaracks too.	
Good job protecting this one large tree from development.	
Mt Baldy is a Kelowna Landmark and should be protected as a recreation/hiking area. This is a beautiful naturally unique area in the middle of the city. Acting as a buffer between residential and commercial zones. The trees here should be protected as well as the grasslands and marshes.	The trails are well used and appreciated by many residents of Kelowna. It could be another star of the RDCOs parks system. Possibly even the location for a new dog park as it is already used by many dog owners.
Too many old trees are being lost downtown to progress.	Old trees should be valued as heritage as much as the old buildings have been.
Great forested and grassland trails.	Maintained by volunteer groups. Could be an extension to the surrounding parks.
Black Mountain Regional Park.	Impressive new park! Love seeing the continued development and growth. Hopefully there will be even more areas like this protected around Kelowna.
Better maintenance, Brandts Creek Pathway is dangerous when it is windy, when multiple spruce trees have blown over and the large willows have had branches big enough to kill someone come down in the winds.	
I'm not sure exactly what this area is called, but its a beautiful forested area I frequent during all seasons.	
The trails and forested area above Wilden are a rare gem.	
Shadow ridge and Kelowna Springs already have beautiful old trees with mill creek on the properties. Many different types of birds and turtles use these area's as nesting grounds and should not be allowed to be re zoned. Many of our seniors can walk these courses which keeps them fit and out of our medical system. So let's KEEP what we already have. Thanks Mark	Shadows ridge and Kelowna Springs already have beautiful old trees with mill creek on the properties. Many different types of birds and turtles use these area's as nesting grounds and should not be allowed to be re zoned. Many of our seniors can walk these courses which keeps them fit and out of our medical system. So let's KEEP what we already have. Thanks Mark
Mill creek and adjacent hillside near Hwy97/Enterprise intersection	This is a beautiful and rare portion of urban wetland and ponderosa forest. It would be awful if a road were build through it.
Ponderosa/bunchgrass hillside ecosystem east of Dilworth/rail trail intersection	The okanagan sunflower display on this hillside is stunning, and it has great views and great potential for park space near the rail trail.

Comment	What do you want to improve at this location?
Awesome forest!	CSRD needs to clean up the amount of fire fuel on the forest floor!
The trees on the Glenmore median feel like a luxury in our urban environment, and i hope we never lose them.	
The trees on the Glenmore median feel like a luxury in our urban environment, and i hope we never lose them.	
The trees that line Glenmore Road are a great joy to me when i sit on my balcony.	
This hillside above Glenmore Road is natural and wild and it is a great joy to me when i sit on my balcony.	
	Love this park and would like to keep it this way
	big bird-friendly trees
love these big trees on a hot day	
so pleased to see liquidambar trees planted here, looking forward to seeing them grow and show off their fabulous fall colours	
lovely to be in amongst all these big ponderosas	
love the variety of trees in this park	
appreciate the tree labels	
Very good owl habitat	Improve forest maintenance and quality of trails
The Mission Creek Greenway is an outstanding resource. Renewal efforts and maintenance work should be continued.	
Scenic Canyon is an outstanding park, with many excellent features: trails, forest quality and maintenance, access, interpretive signs.	
Giant cottonwoods	
Beautiful forested area. Lots of wildlife. Great for hiking and just clearing your head. Absolutely needs to be preserved	Trees need to be kept. No housing! We need these forested spaces
Best place in the world to free yourself of stress.	
I love this little park, please keep its pond and trees in good shape, thank you!	
A precious little gem; very thankful for this little green space!	

Comment	What do you want to improve at this location?
Love it!	
I greatly love and value this precious gigantic willow tree, and I implore you to designate it special status to always preserve it. She is simply magnificent!! Thank you!	
I love this park, and I hope you will continue to support and preserve the many wonderful unique trees it has. Thank you for a great job here!	
Love this bird sanctuary, thank you!	
A very special and valuable place, love it, thank you!	
Gorgeous precious park - love this place, thank you!	
Forested crown land but not cared for	This is forested crown land, but has had many issues with illegal dumping and camping. It could however bring a lot of value as a park. A picnic area, dog park or even cycling amenities as its a common area for road cyclists.
Love that lots of birds use this big tree	
Really appreciate how cool Mission Greenway is to walk or ride on a hot day	The beautiful park needs improving by adding more easily maintained trees, and a plan for when Benvoulin Rd is expanded. don't lose this precious space!
Ravine forested area	
The parking and access to the greenway is wonderful.	lower speed limits on roadway and early flashing lights. Cyclists to dismount o crossing here as most are inconsiderate speedsters.
I value this protected patch of nature so much. It is very close to where I live and provides a beautiful, quiet spot to watch many different animals	
This oak is so beautiful and I love that more have been planted around it. The mulch is practical and aesthetic too	Maintain this greenspace
Mission Creek parkway area of woods with walking trails near EcoCentre	
Woods with trails across Mission creek from the EcoCentre	A quiet place to walk among the trees

Comment	What do you want to improve at this location?
Deer, eagles, hawks and countless smaller animals use this area as their home. This is still a stand of pines that survived the fires, but is at risk from development. I would hope that it can be preserved.	
I see wildlife constantly traversing this corridor and it needs to be preserved or if possible, expanded to allow them to move even more freely.	
Love the views and the natural/accessible trails.	
Love the variety of ecosystems as you hike/walk this section of the Greenway.	
Beautiful mature trees on Bernard	
Cool exotic trees in Kasugai Garden	
Majestic Weeping Willows	
I love the walk along Bellevue Creek and hope all the trees remain.	
Mature trees and shrubs includes a variety of wild life, located between 2 senior citizen residential areas. Shade, oxygen, walking paths, birds and natural, tranquil beauty. Helps to buffer traffic noise from KLO and Gordon Ave. Small in green space but huge in natural value.	
I love the trees for shade and on a hot day it's a cooler space to be in. I have enjoyed how over the last few years we have been able to do tai chi in the park, felt so connected to the earth.	
When I saw this development go in many years ago, I wondered what had happened to the park of my childhood. This summer while exploring I realized the public still has access to this park even-though it looks like you are going on their private property. How overjoyed I was to see this persevered and as beautiful as ever. What a great example of a development that saw the beauty of the	
Arboretum adjacent to the walking path is a great idea and seems like there could be some opportunities for future expansion.	
We'll maintained access corridor through mature deciduous forests easily accessible by all members of the general public.	
I value the large trees, the shade they offer, the quiet space and that there are benches to sit and listen to the birds that live there.	

Comment	What do you want to improve at this location?
park around it and found a way to engage with it for all citizens to still enjoy.	The off-leash dog park here could really use some shade on the South and windbreak on the North, please and thank you!
	There is an incredible pond with numerous types of birds landing that I do not see anywhere else on Glenmore Ridge. I would like to see debris cleaned up from nearby small ponds, and ensure that with a portion of the land zoned for new Wilden developments, that the biodiversity will be maintained and the pond won't be cut at the edge with a house.
	Central mobile home park has numerous mature trees that should be protected from new development. This is a high value location. Mature Trees along Casorso Road are under threat from development at Central Mobile Home park. These trees are an asset to the streetscape providing nature, shade, wind protection and a visual buffer along sidewalk. Even greater value with new separated cycling path going in.
	McKinley Beach area that was supposed to be expanded for more urban sprawl was found to be high value Ponderosa Pine forest that needs to be protected
	Lots of mature trees. We need to keep these
	Red pin - for marking urban forest locations that need improvement
	*Each row corresponds to one pin. Rows with no text entry indicate a pin was submitted with no further comment.
Comment	What do you want to improve at this location?
Trees were removed here during the construction of the bike path but were never replanted	We need far more trees in almost every building plan and parking lot in the city.
This school yard could use some livening up with lovely trees and not	Trees are necessary for enhanced liveability on every street.

Comment	What do you want to improve at this location?
just pavement.	Especially in the urban core.
If you don't plant trees in the streets downtown, at least get rooftop gardens going please. But really, trees we can see at ground level are most desirable.	
Very open, especially around play area. Could use a few more trees to compliment those around the edge. Some could also be added to the "berm" area. Ice trees around the walk and creek, but needs a few for infill.	
	Nice trees around the edge, but some infill would be nice. South side of play area to shade playground. Possibly some added to "berm" path area.
	Casorso is a terrible road, no trees, no sidewalks, no place for residents to walk, sit, chat and be neighbourly. Due to this neglect it only gets speeding cars from far away and very few bikes or people walking and chatting with neighbours.
	Very few trees, no multi use path or benches. This could be a fantastic location for a treed multi use park/corridor as it connects schools, churches, neighbourhoods, shopping and the waterfront. It is currently not designed for the people who live near but rather for those who live far away to speed through.
	Untended poplars falling apart due to stress. Large amount of invasive herbaceous weeds in the naturalized area of the Power Line Park.
ditto	planting of this area with native species (woods Rose, saskatoon berry etc.) almost completely failed. Needed water for the first year. area around north side of this retention pond is barren of any shrubs or trees, (a lot of invasive herbaceous weeds).
	area is still recovering from the flood. Needs some replacement trees and bank stabilization with vegetation. More diversity needed. problem with people making their own bike trails. Spoils the natural

Comment	What do you want to improve at this location?
setting. This area has become very overused last few years.	Trails and the creek are important in this area.
I hope as this development continues to grow that the "linear park that has developed here by residential use will be preserved. Road and housing development seems to have stalled in this area. The developer has left behind a mess of equipment with some leaking fuel.	Cleanup needed. If this area is not viable for housing development, it is certainly valuable as a potential recreational area.
Remove or prune over grown vegetation, this cant just be once a year and then waiting until a spruce or willow tree blows over and kills some one walking their dog below. This area brings hundreds of walkers every day, we cant have another resident die from injuries received slipping on ice in the winter, maintenance needs to be year round.	Waterfront Promenade is a beautiful walk in the summer, but there is very little shade and it is extremely hot
Area adjacent to rail trail east of Spall/Glenmore/Clement intersection	This habitat is disturbed but has great potential for remediation by native species. It would be a shame to build a road through the only non-car cycling path in this area.
There is a tremendous amount of fallen trees, piled up branches and piled up forest litter just left on the forest floor! This forest floor fuel needs to be removed as it is just tinder waiting to spark a inter urban forest fire disaster!	Still waiting to have this developed into a park
whole campus needs more trees	The brewery district could really use some street trees to make it more comfortable to walk around.
I hope new development will be covered in trees	The brewery district could really use some street trees to make it more comfortable to walk around.
While I appreciate the effort to add trees near the new Costco on Leckie Road, there does not seem to be enough of them and they are quite small.	

Comment	What do you want to improve at this location?
So many trees were removed from this area of Mission Creek Park to create green space and play areas. I hope there is a plan to replant trees especially near the road and in around the green space.	Replanting around the pond should include species that will thrive in the wetland habitat. Last tree planning efforts used cedar and other species not suitable, and most have since died. Development here has removed a corridor for animal movement.
	Replanting should occur here to compensate for the deforestation effects of the OK Mountain fire. This small strip cannot be reasonably called a park given the lack of a trail, poor access route, and forest cover that is limited to a few mature pines.

Comment	What do you want to improve at this location?
This whole area used to be so pretty, green, and family friendly; definitely needs serious green planning and neighbourhood improvement support. Thank you!	
Soil filled boulevard with no plantings, on a block with no street trees	Soil filled boulevard with no plantings, on a block with no street trees Add more trees for shade
Remove invasive Siberian Elms, and plant native shrubs and trees	Remove invasive siberian elms. Improve flood protection. The large open field in this area would be great for a dog park.
Farmers market needs mixed tree and shrub forestry.	This could be a wonderful urban natural area. However, it is often filled with litter and abandoned camping gear. Additional clean-ups and more lighting would be useful.
Chance to add trees as the Parkinson Rec Centre future is developed	More large shade trees will be needed in this park to counter the high summer temperatures as climate change worsens...
More trees should be planted in the new Pandosy Waterfront Park to provide shade for walkers and park visitors.	More large shade trees needed on campus
Development of this area needs to include large shade trees and not just stacks of ridiculously tall buildings	I have seen signs of people camping and making campfires in this high risk urban interface area. Also Gallagher's golf course forest floor has high fuel load in many areas which is neglected except areas cleared by adjacent residents
Urban interface with many trees but could be improved by sustainable logging perhaps or anything to reduce fire hazard	This is a lovely shaded area with no public access. Why did the city not work on creating a path rough to Lakeshore when the developer started redoing the trailer park?
Hellish road for anyone not using a car. Why is the Casorso path not being continued through to Mission creek green way? Both are very	Access for folks who choose not to use cars or big trucks. People pay tax not cars, give the people the access priority.

Comment	What do you want to improve at this location?
well used but not connected.	Huge opportunity for a multi use path along Benvoulin road to connect agro-tourism to the urban core. Farm markets, vineyards, historic sites, garden centres etc. Why is the city's only plan to turn this into a 4 lane speedway and not to create more space for citizens and tourists to explore without a vehicle? This could connect nicely to KLO and Burtch rd.
This whole area doesn't have any trees	There needs to be trees planted here and benches or other ways to engage this space. It's lawn that often dries out in the summer and is just such a sad area, in what should be an area of engagement in the city.
This green space is not being used to improve the quality of our city or its citizens and visitors. There are not trees for shade where the former senior centre was and this section of the boardwalk is often one of the hottest and less enjoyable parts of the walk.	Trees are needed, as this area gets very hot in the summer and not enjoyable.
Such a nice manufacturer beach area but there are no trees for shade. The slope is gradual which allows for a variety of users to access the water but there are no trees for cooling and to preserve erosion of the beach.	collaborate with SD23 to add trees. Perhaps do a land swap with Cetnral Mobile park to protect those trees.
SD23 needs to be part of the urban forestry plan. There are only three trees at Casorso elementary, providing little protection from the sun for children and poor sense of plan.	

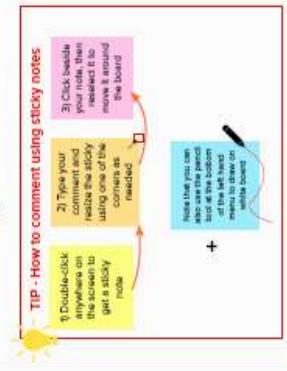

Appendix C – Stakeholder workshop boards

City of Kelowna - Urban Forest Strategy Update

Stakeholder Workshop

Oct 27, 2022

Warm-up

What organization, company, or community group are you associated with/representing today?

Central Okanagan Local Tree Community with City (government properties owned or concerned)	Kelowna Tree Protection group - concerned citizens about the urban forest	Chelan County Hub - action against climate change impact at the local level (adapt + mitigate)
Borrelli tree experts - Vernon	Action Tree Service - Kelowna tree economy working often with the City	Sustainability consultant in energy + envi. plus planning, and perennials - Sustainable Landscaping Learning centre
Munby agroforestry - work with Kelowna and Vancouver Island	Arbor care Tree Service - Tomality urban forester at a municipality	Physicians in public health + preventive medicine - health officer, clinics of physicians across all levels + mental health team + mental health
Bulldogs + sustainability services for Okanagan college - including campus and students	NeighbourWood runs 1-2 times/ year - pick up may still be a challenge	Bulldogs + sustainability services for Okanagan college - including campus and students

Concerns

What are the current challenges affecting tree planting?

Nursery stock

Finding
stock to
plant trees
is difficult

Could nurseries
operate as a
regional level
instead of
local?

Need nurseries
to work with
municipalities/
local gov in
Okanagan urban
region

Do you have any ideas/opportunities for planting the urban forest?

Opportunities

Do you have any ideas/opportunities for planting the urban forest?

Incentives

Could we
incentivize
tree planting
on private
land?

City guide

exists - could
be shared
more widely

Creating a guide
for residents to
select the right
tree for their yard
would be helpful

Trees can be
expensive,
complicated to pick
up and plant - can
we motivate people
beyond the love of
the tree!

Work with local
nurseries so that
good advice is given
when people select
trees for their
property

NeighbourWood
runs 1-2 times/
year - pick up
may still be a
challenge

Improving tree selection on private land

Tree removal
being wrong tree
planted e.g. small
yard with big tree
species

Nurseries should
ideally stop selling
e.g. invasive species,
in addition to
providing better
local planting
recommendations

Work with local
nurseries so that
good advice is given
when people select
trees for their
property

Pests and diseases -
e.g. osprey disease;
public awareness of
those issues would
help selecting trees
that can stay in the
landscape long-term

Street tree planting

Update bylaw to
provide sufficient
blvd size to support
street trees (narrower
sidewalks or other
compromises to allow
trees)

Boulevard planting -
sidewalk requirement:
bylaw specific
requirement for blvd clearing but
lack sufficient space

Mundson pond
- couldn't plant
trees because
there weren't
trees available

Native vegetation is
difficult to source
everywhere - perhaps
a good partnership
opportunity with
organizations like
streamkeepers

Front yard trees
instead of blvd trees
isn't a suitable
alternative - doesn't
have the same feel
on the street side

Boulevard trees
provide more
comfort for
walking/separating
from the street

Blvd trees often a
challenge to maintain
- could there be a
small green space
dedication instead of blvd?

Theme # 1 - PLANTING

Theme #2 - MANAGING

Concerns

What are the current challenges affecting urban forest management?

Removing barriers

Cost + complexity of tree management - treating pest/disease, planting trees in wrong locations or maintaining trees under power lines

Species selection

Residents might not get excited about planting trees because of those barriers.

Tree removal is expensive! Could this be managed more efficiently

Natural water availability changes - is City looking at technologies to supplement water for public trees? Or select different tree species?

City expect trees to need water for a few years to establish + using silva cells

Opportunities

Do you have any ideas/opportunities for managing the urban forest?

Working with community members

Would need to have a municipal staff to coordinate those types of programs

Adding community contributions to improve City's workforce

Community-led OR city-led to have community members working with the City to plant trees in areas that have potential

Post-pandemic, people want to build social capital and get out. Planting and gardening would be good opportunities to make people more confident, give them something to care for - proven health benefits from sense of purpose!

Large tree benefits

Improving understanding of the importance of mature trees - some people are scared by large trees, but they provide most benefits!

Local tree companies sometimes need more information to avoid inflating risks!

Increasing the literacy about urban forest

Theme # 3 - PROTECTING

Concerns

What are the current challenges affecting tree protection and retention?

What's the City's capacity to protect trees on public/private land?

Higher costs make people less likely to want to remove trees

Bond for tree removals speaks to new tree values - could bond values be related to appraised value for tree removed + cost of tree to be replaced (10th edition valuation)?

Tree value needs to account for benefits provided

Lots of tree removal taking place for development. Can we protect the trees?

Citizens feel cynical about tree retention - City should share info about importance of trees AND instances/ places where trees get saved.

A good resource for tree related benefits is iTree. The tree information can be added and it will estimate tree benefits and values.

From my experience from asset management plans there generally a need for increase in maintenance in small and large trees. Will there be a change in budget or need for change the budget for tree maintenance?

Opportunities

Do you have ideas or opportunities for tree protection or retention?

Boulevard trees are rarely evergreens but provide important benefits

Developments rarely plant evergreen trees - could we require some planting?

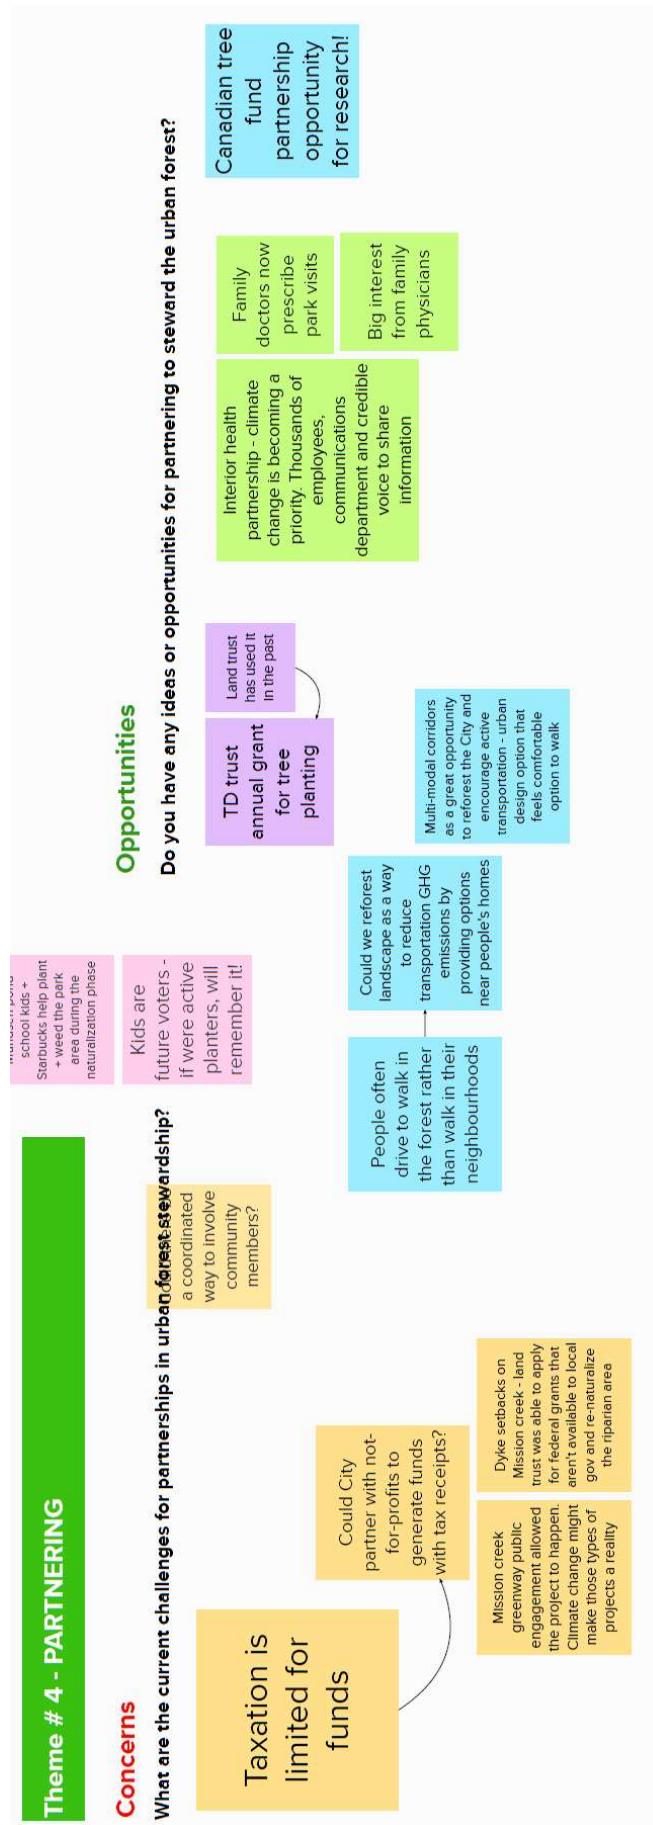

Could we reframe trees as an amenity (like daycare or otherwise) with a \$ value for how they increase value + quality of live

There is an equity component to distribution of the urban forest - have not's are missing out on an important asset (size, species, historical value of trees)

Realtor amenities should include trees!

"And no bird sang"

book - noticing presence/absence of tree amenities

Theme #2 - MANAGING

Concerns

What are the current challenges affecting urban forest management?

THE JOURNAL OF CLIMATE

Where are the areas that natural species can be allowed to grow, mature, die at a natural pace?	Can those areas be given more priority for protection?	in see inappropriate species planted under lines; how far back to conversations with utilities go?	worried about expensive shift to underground electricity	Over 70% of canopy is on private land - what is the city's intention with how canopy cover increases will be targeted for private/public land?
---	--	--	--	--

we're dealing with the legacy of past tree plantings around utilities

need more planning of services integrated - think of canopy cover as a service, like power

<p>Furts isn't always concerned to accept tree species. Powerlines could lead to substantial species choice</p>	<p>does fortis manage all power line pruning?</p>	<p>coordinating utility trees in conflict with powerlines is difficult. how new success- es relate to replacement</p>
---	---	---

plantings between
sidewalks/boulevard
(Clinton road between
Rio Drive & Modem

Three areas of concern:
What is the likely rate estimate
adjustment for children?
How can we improve the
existing literature to better
inform guidelines and the
implementation of such
guidelines in practice?

to what extent is lawn culture inhibits residents from planting trees on private property?

Opportunities

Do you have any ideas/opportunities for managing the urban forest?

Theme # 3 - PROTECTING

Concerns

What are the current challenges affecting tree protection and retention?

Do we have a plan to preserve a legacy forest or ecosystem? (consideration benefits)	concern with loss of large, mature trees during development
What education options for tree protection during development / construction / demolition?	how does city address trees along major mode of transportation highway?
Do we have a plan to preserve a legacy forest or ecosystem? (consideration benefits)	city lacks authority over what is planned, how much is planned along major highways?

Do we have a plan to preserve a legacy forest or ecosystem? (consideration benefits)	need to acknowledge potential impacts of tree removal with long expected lifespans
Do we have a plan to preserve a legacy forest or ecosystem? (consideration benefits)	absence of a private land tree bylaw

Opportunities

Do you have ideas or opportunities for tree protection or retention?

improving development regulations to support tree retention	need protections not just for stems, but for root zones
replacement ratios - replace 2 trees for every one removed?	The city and its development directors need to work together to make changes. Other very good suggestions. To build on existing City and developer guidelines. Also a suggestion to consider more detailed tree protection measures.
development from and character - an avenue of tree retention and try to preserve tree values	Increase funding availability between the City and private developers for tree protection and retention. The development arm can also work with the private sector to help implement bylaw

Opportunities

Do you have ideas or opportunities for tree protection or retention?

Theme # 4 - PARTNERING

Concerns

What are the current challenges for partnerships in urban forest stewardship?

How can we consider reconciliation in the context of DRPA (provincial) govt action plan?	DRPA submissions on DRPA submissions grant requirements to partners (e.g. First Nations)	Need to review what has been implemented in terms of implementation of energy efficiency	Need to facilitate communication to partners to ensure alignment between trees and the energy efficiency challenge?	Utility line limit - potential planning - vehicle spacing, etc.
Ongoing need for volunteers "resistance" during planning with the public. How can we better involve the public in a meaningful way in the planning process? (e.g. new buildings, wetlands, etc.)	Partnership with Fortis BC	Need to increase levels of grant if needed (e.g. higher levels of implementation of energy efficiency)	Need ready communications to partners to ensure alignment between trees and the energy efficiency challenge?	Partnership with Fortis BC or other energy providers on energy efficiency issues and implementation of energy efficiency

City is retasking its outreach with Indigenous nations	Covering with an integrated approach to Indigenous relations to reflect on the National Urban Forest Strategy for the Urban Forest Strategy	May also include opportunities through industry organizations	Urban tree inventory and database on curves to measure the value of urban biodiversity	Urban tree inventory and database on curves to measure the value of urban biodiversity
UFCO with sustainable collaboration and to increase its role in the urban forest strategy	Confidence of stewardship in helping private citizens understand future species suitability?	How to orient opportunities to the long-term - what should we be planning today?	Change to focus on local community and urban forest needs about species suitability	Urban tree inventory and database on curves to measure the value of urban biodiversity
UFCO research	UFCO research	Research - may be useful opportunity for increasing adoption of native species in built environments beyond actions	Research - may be useful opportunity for increasing adoption of native species in built environments beyond actions	Urban tree inventory and database on curves to measure the value of urban biodiversity
School district	Indigenous peoples' role in stewardship in helping private citizens understand future species suitability?	Indigenous peoples' role in stewardship in helping private citizens understand future species suitability?
